DB Project

Each group must submit a report with the following requirements:

Analysis, design and implementation of certain domain:

- Write a title indicating the domain you will use

- Write down description of the chosen domain (application)

- Important assumptions and constraints

- Draw a detailed EER that represents your domain

- Change EER into relational DB indicating all primary and foreign keys in each table.

- Indicate important reports.

- Implement your design using any software available. At least five reports are implemented. Write the corresponding SQL for these reports and sample of the output

Due Time: 11/12/2018
